

Tunis, September 10th, 2025

Subject: Recommendation — Mr. Aziz Gharbi

To the Admissions Committee / Hiring Manager, As the Head of FNZ Tunisia, I am pleased to recommend Mr. Aziz Gharbi, who completed a full-time internship at our Tunisia site from July 8th, 2025 to September 8th, 2025 under the supervision of Mr. Mohamed Amine Ferchichi. Although Aziz joined us in a software engineering capacity, his deliverables consistently reflected the quantitative discipline and governance mindset required in FinTech environments:

- **Data engineering for analysis-grade datasets:** Built a clean ingestion flow from Excel exports with schema validation, normalization rules, and reproducible weekly outputs (PDF/Excel) distributed via signed URLs.
- **Time-series & statistical reasoning:** Helped define practical KPIs applied careful date-range/cohort filtering, treated missing/duplicate timestamps, and enforced time-zone consistency—all directly applicable to data preparation and reporting.
- **Controls, risk & compliance:** Implemented JWT authentication, and TLS/WSS transport; maintained audit-friendly logs, and documented decisions—habits aligned with model/data governance and internal control expectations.
- **Reliability & performance:** Added service health probes and scheduled jobs, and emphasized idempotency in background processes, reflecting production readiness for analytics systems.
- **Stakeholder communication:** Collaborated across technical and HR teams, translating requirements into measurable outcomes and clear documentation.

Aziz is pursuing FinTech and aiming for an actuarial trajectory. Based on his performance—combining software craftsmanship with quantitative rigor and data integrity—he is well prepared for advanced academic work (e.g., risk analytics, financial data engineering) and early-career roles that bridge engineering and actuarial analysis.

I strongly recommend Mr. Aziz Gharbi for graduate study, scholarships, or internships in FinTech/ Actuarial Science, and likewise for Software Engineering /DevOps roles. He has demonstrated the ability to deliver production-like components while upholding the standards expected in regulated financial contexts.

Sincerely,

Mohamed Chaari
Head of FNZ Tunisia
